KEYMACRO is a file encryption program. It is based on the strongest algorithms. By using it you can easily encrypt your documents, files, pictures and videos. MORE INFORMATION:KeyMacro is the second password manager that we've reviewed recently and it seems this program has been designed with some of the strong password managers in mind. For example, it comes with a Wizard mode. All you need to do is put in a new password and press "Next" to have your file/folder encrypted. You can also use this Wizard mode with external software such as DBPSafe, Password Safe and ZTDownload. Besides the Wizard mode, KeyMacro includes a Document Encryption mode, which can be used to encrypt selected documents and a Windows Explorer mode, which can be used to encrypt your entire file system. What's really interesting is that this program can be used on Windows XP, Vista, 7, 8, and 8.1. KeyMacro Features: Wizard mode - Put in a new password and press "Next" to have your file/folder encrypted. Document Encryption - The program lets you select a document/folder and choose to encrypt it or just the password, if no document/folder is selected. Windows Explorer mode - The program lets you choose a directory and have it encrypted or just the password, if nothing is selected. The program offers a user interface that is similar to the keyboard. You can use it to type in your password, select a file or folder, and then click on the "Start Encrypting" button. When you click on a file/folder or a directory, KeyMacro creates a new.kmm password file. When the "Password Encrypted" notification appears, you can click on it to review the settings for the selected file or folder. You can also use the "Restore" button to have the file/folder in the previous state. This program will make use of the same method to store all of your passwords. It supports different types of file format, including: Word (doc, docx, xls, xlsx, pdf), Excel (xls, xlsx), PDF, RTF, Text, Zip, tar, tgz, tar.gz and Password. KeyMacro Encryption Strength: KeyMacro offers a high level of encryption. The algorithms are strong, and the source code is 81e310abff

Intel spent \$10 billion on a big data center in Oregon Intel is spending \$10 billion on a big data center in Oregon. The company announced the investment today and says the new data center will be one of the largest data centers in the world. Intel says it will create at least 2,800 jobs in the state. Intel says its investment will help the company deploy its many "transformation technologies" like advanced processors, software, and analytics. "Our investments in Oregon show our commitment to creating jobs in the state and strengthening the local economy. Intel will create 2,800 jobs over the next 10 years and invest more than \$10 billion in Oregon," said Intel's CEO Brian Krzanich in a statement. Intel says the investment will help it provide the fastest and most secure computers for the world's most sophisticated data centers, including those in a wide range of industries including digital media, semiconductors, and high-performance computing. "Oregon's unique position as a world-class high-performance computing center makes it the perfect location for Intel," said Brian Pearce, Intel's senior vice president of worldwide sales. "Our advanced manufacturing capabilities in Oregon, along with the collaboration of Oregon's talented workforce, will enable Intel to deliver the most secure and efficient computing products to our customers." Intel is planning to invest a total of \$10 billion in Oregon over the next 10 years. To date, Intel has invested more than \$5 billion in Oregon. Intel says it will create 2,800 jobs in the state by 2020. At the moment, Intel is recruiting about 300 people to the new data center in Oregon. Intel has been the largest single source of jobs in Oregon over the past 10 years. A known thermal printer includes a main body which is housed in a casing or the like. The main body includes a printing head, a platen roller, a paper cassette, and the like. The printing head is for applying ink to the paper. The platen roller is for advancing the paper, on which the ink is applied, with the paper held in close contact with the platen roller. The paper cassette is for accommodating the paper. The platen roller is normally held in contact with the paper in the cassette so that the paper can be held on the platen roller in close contact with the platen roller while it is being fed. When the printing is completed, the platen roller is lifted to separate the paper from the platen roller, so that the paper can be taken out of the paper cassette. At this time, the ink on the paper is wiped away from the printing head, and the printing head is cooled. The main body of the thermal printer is normally supported by a bracket attached to the casing. The bracket can swing so that the main body can be easily swung
